hoseingorji1383@gmail.com | +1 416 662 4071 | LinkedIn: Hossein Gorji | GitHub: HosseinGorji05 | Portfolio

Full-stack developer shipping real-world applications — from live restaurant platforms to self-correcting AI agents and edge-compute systems recognized at NVIDIA hackathons. Seeking Winter 2027 internship.

EDUCATION

B.Sc. Honours Computer Science · York University, Toronto

Expected May 2028

Relevant Coursework: Object-Oriented Programming in Java, Linear Algebra, Discrete Mathematics, Data Structures and Algorithms, Computer Architecture, Web Development (JavaScript)

TECHNICAL PROJECTS

Solo Developer | Executo | Personal Project

May 2026

- Built a self-correcting Python code-generation agent using LangGraph: writes code and unit tests from a plain-English prompt, executes them in an isolated Docker sandbox (no network, capped CPU/RAM), and rewrites until tests pass — 90% pass rate on HumanEval.
- Implemented a strict dual-test loop (AI self-tests + fixed HumanEval benchmark tests must both pass); fix prompt labels which suite failed so the LLM targets the real error.
- Shipped a streaming Gradio web UI with dark mode, Solution/Tests code tabs, run-again button, and per-session rate limiting wired to live agent progress.

Co-Developer | Delatio | NVIDIA Spark Hack Toronto

May 2026

Toronto, Ontario · Hackathon

- Co-built a local-first edge-compute urban risk intelligence platform running dual proactive/reactive AI loops on a single NVIDIA Grace Blackwell GB10 node — zero cloud dependencies.
- Engineered the GIS data layer by optimizing raw Toronto Open Data into a high-performance in-memory GeoPandas structure; spatial queries feed an autonomous agent in under 20 ms.
- Designed for complete data privacy and continuous operational reliability for civic emergency response with no external API calls at runtime.

Lead UI/UX Developer & Git Specialist | Potluckio | CTRL+HACK+DEL Hackathon

Feb 2026

- Built a real-time group meal-planning web app with live item-claiming via Firebase Firestore, allowing guests to coordinate contributions instantly through a shared link.
- Sole owner of the entire frontend design and Git workflow on a 2-person team; delivered a fully functional, publicly demo-able product within the hackathon deadline.

Web Developer | Kolbeh | Freelance Contract

May 2025 – Present

Toronto, Ontario · Remote (Client in Iran)

- Designed and deployed a fully responsive restaurant website for a live family business in Iran, actively used by real customers via QR code menu scanning.
- Built a Node.js + Express backend with SQLite3 managing 30+ menu items with persistent storage, user authentication (bcrypt), role-based access control, and a favorites system.
- Secured REST API endpoints through parameterized queries, input sanitization, and CORS policies to prevent SQL injection and unauthorized access.

WORK EXPERIENCE

Customer Service Associate | Metro

Jul 2023 – Feb 2025

Toronto, Ontario

- Delivered high-quality customer service and managed transactions in a fast-paced retail environment; collaborated with team members to relay customer feedback directly to management.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), Python, Java, C, Bash, SQL, HTML5, CSS3
Backend & APIs:	Node.js, Express.js, REST APIs, CRUD, bcrypt, CORS, Input Sanitization
Databases:	SQLite3, MySQL, Firebase Firestore, Relational Schema Design
Frontend:	React, Responsive Design, CSS Flexbox/Grid, Async JS (Fetch API)
AI & ML:	LangGraph, LLM Prompt Engineering, Agentic Systems, HumanEval Benchmarking
Infra & Tools:	Docker, Git, GitHub, Linux, GeoPandas, GIS, npm, VS Code
Languages Spoken:	English (full proficiency) · Persian (fluent)
